The AI completed an end-to-end workflow in the NGPF Bank Simulator, starting from the homepage, initiating a banking scenario, and navigating to the detailed savings account activity. This workflow demonstrates how users can easily access and review savings account transactions within the simulator.

Step-by-Step Walkthrough

1. Bank Simulator Homepage

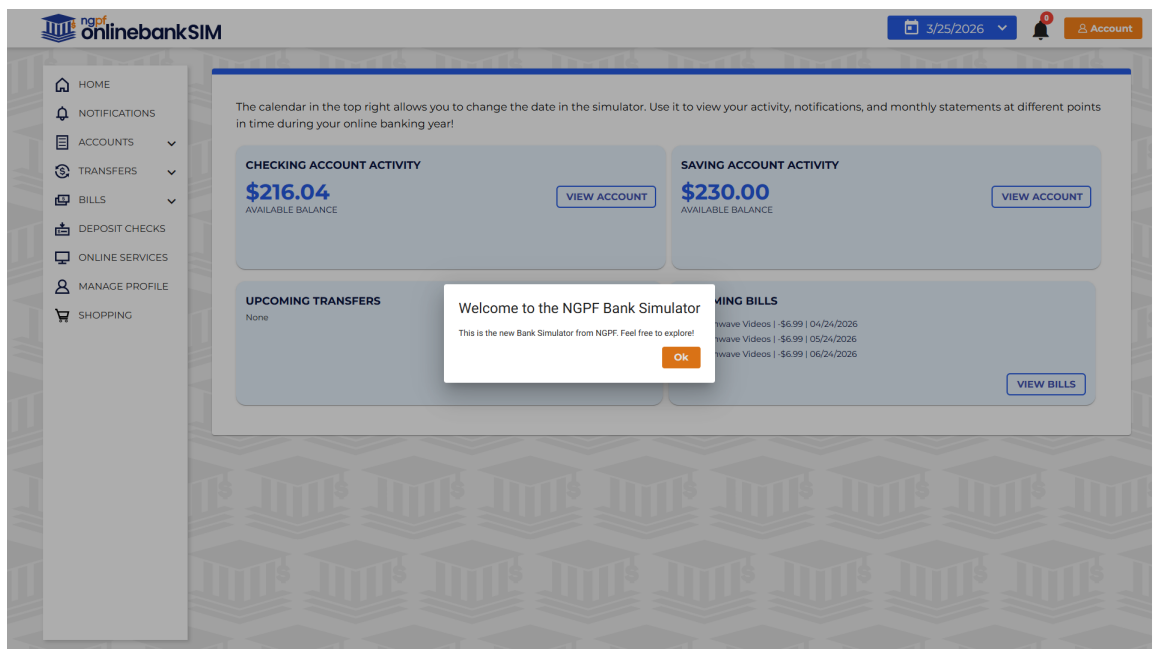

The AI navigates to the NGPF Bank Simulator homepage, showcasing available features and a prompt to get started.

<https://www.ngpf.org/bank-sim>

2. Scenario Initiation Dialog

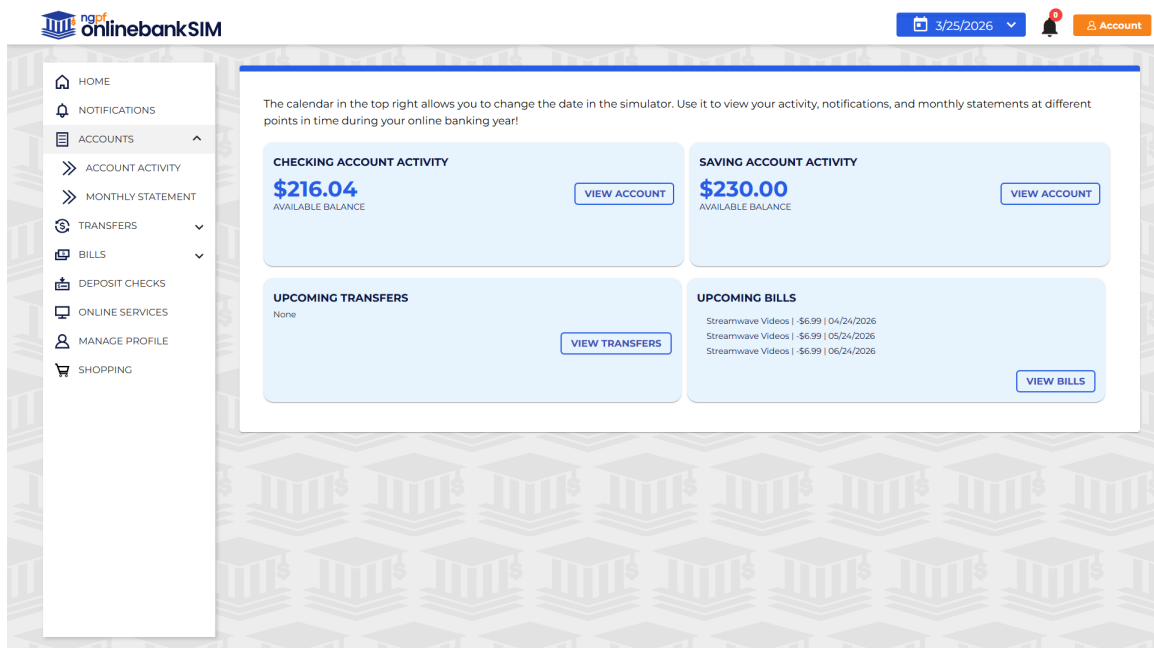

The AI initiates the scenario and encounters a welcome dialog, ready to begin the workflow.

<https://www.ngpf.org/bank-sim/home?returnUrl=%2F>

3. Expand Accounts Section

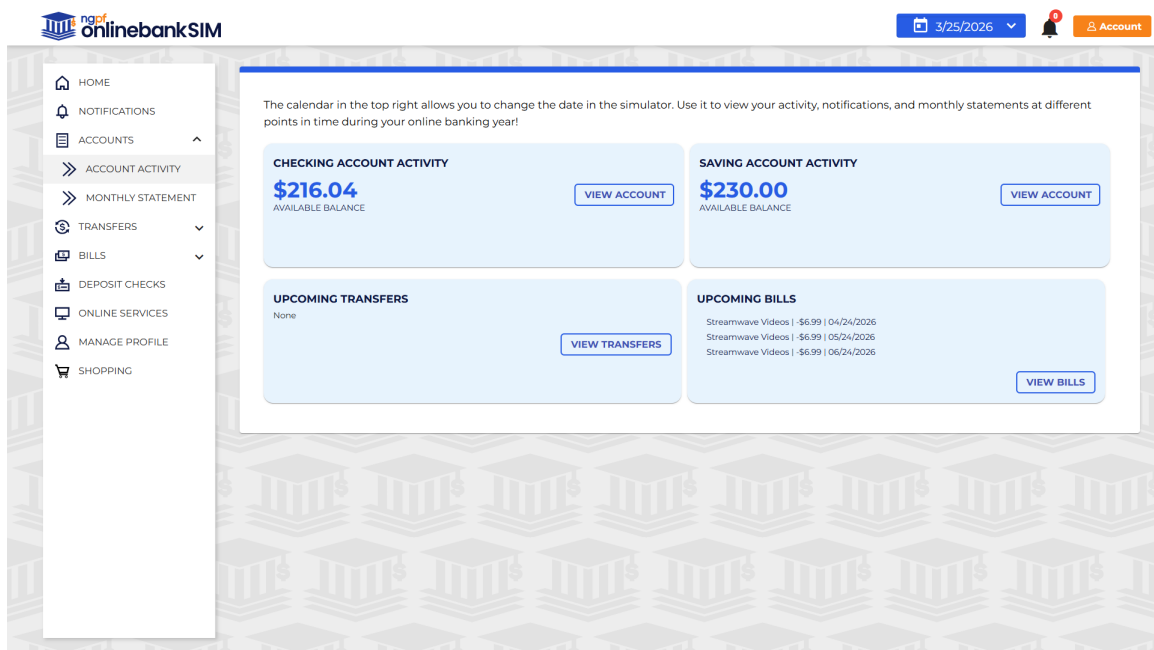

The AI expands the 'ACCOUNTS' sidebar to reveal account management options for further navigation.

<https://www.ngpf.org/bank-sim/>

4. Select Account Activity

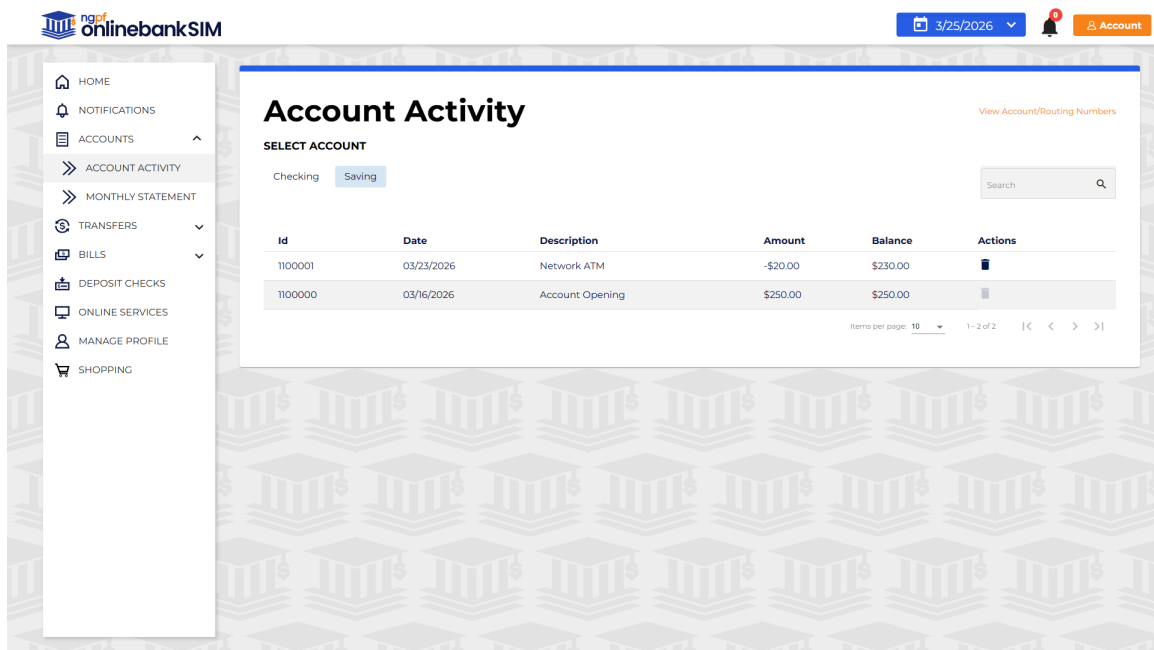

The AI selects 'ACCOUNT ACTIVITY' to access detailed account information and transactions.

Discovered Test Scenarios

#	Scenario	Type	Priority
1	Discovered Workflow: e2e_business_workflow - Complete User Journey	e2e_business_workflow	high

Discovered Workflow: e2e_business_workflow - Complete User Journey

Comprehensive test covering the user journey of accessing the savings account activity in the NGPF Bank Simulator.

A user navigates to the NGPF Bank Simulator, initiates the banking scenario, closes the welcome dialog, expands the accounts sidebar, selects 'Account Activity', views the savings account, and displays its activity. This sequence validates end-to-end access to account details, confirming workflow completion as observed.

- Use `waitForSelector` for dialogs and menu transitions.
- Use `pressSequentially` for steps inside web components (copy the `web_component_parent` field where present).
- Validate each page change with URL assertions as observed.
- All selectors are mapped from captured database; use alternatives when primaries are unstable.
